ABSTRACT

The abstract is a single paragraph of 150–250 words without citations, unexplained abbreviations, tables, or equations. It summarises the background and objective; the method (design, participants or data, analysis); the principal findings; and the conclusion and its implications. For conceptual papers and reviews, it reflects the approach, the central argument, and the principal contribution.

Abstrak — Indonesian abstract, 150–250 words, equivalent in content to the English abstract above.

Kata kunci: kata kunci 1; kata kunci 2; kata kunci 3; kata kunci 4; kata kunci 5

1. Introduction

The introduction presents the background of the problem, the research gap the study fills, the novelty and contribution of the study, and the objective or research questions stated explicitly.

In-text citations follow APA 7th edition and are produced by biblatex-apa: parenthetical (Penulis & Penulis, 2024), with a page number (Penulis, 2023, p. 15), and narrative citations such as Penulis and Penulis (2022). Every cited source must be in the reference list (`references.bib`)

and every entry must be cited. Self-citations are written neutrally so that the authors are not revealed. The line numbers in the margin help reviewers refer to passages; they disappear in the published version.

2. Research Method

Describe the research design, setting and period, population and sample or participants, instruments and data sources, data-collection procedure, and data-analysis techniques in enough detail for the study to be assessed and replicated. For review articles: search strategy, databases, inclusion–exclusion criteria, and synthesis method. For conceptual articles: approach and basis of the argument.

2.1. Subsection (if needed)

If the study involves humans, animals, or personal data, state that ethical approval and informed consent were obtained, without naming the approving body in this anonymised version.

3. Results and Discussion

Present the findings systematically, following the objectives, then discuss their meaning: relate them to theory and earlier research, explain agreement or divergence, and show the contribution.

3.1. Tables

Tables are numbered consecutively with a descriptive title above, are referred to in the text before they appear (Table 1), and use `booktabs` *rules without vertical lines. Sources or notes go below the table.*

Table 1
Descriptive table title.

Variable	Group A	Group B	*p* value
Variable 1	0.00	0.00	0.000
Variable 2	0.00	0.00	0.000
Variable 3	0.00	0.00	0.000

Source: Primary data, processed (2026). Note: explain abbreviations if any.

Word count of the main text: … words (excluding references)

3.2. Figures

Figures are numbered consecutively with a descriptive title below (Figure 1), have sufficient resolution (at least 300 dpi for photographs), and remain legible in black and white. Insert PDF/PNG files with `\includegraphics`.

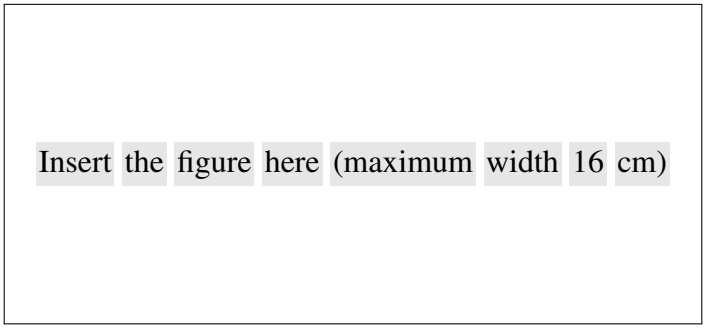

Figure 1. Descriptive figure title
Source: Authors' analysis (2026)

3.3. Equations and block quotations

Equations are numbered at the right margin and referred to as Equation (1). *Direct quotations of 40 words or more are set as a block paragraph (*`quote` *environment) without quotation marks, with the page number of the source.*

$$y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \varepsilon \tag{1}$$

4. Conclusion

The conclusion answers the objective or research questions concisely without repeating the results, states the theoretical and practical contribution, acknowledges the limitations, and suggests directions for further research. Paragraphs, not a bulleted list.

Acknowledgements

Leave empty in the anonymised version; given on the Title Page and added after acceptance.

Ethical Approval and Informed Consent

Statement where applicable, without naming the body in the anonymised version; or "Not applicable."

Conflict of Interest Statement

The authors declare no conflict of interest related to this manuscript.

Author Contributions

Author 1: conceptualisation, methodology, writing – original draft. Author 2: data analysis, visualisation, writing – review and editing. All authors approved the final manuscript.

Data Availability Statement

Location of the supporting data (withheld during review) or "Not applicable."

Declaration on the Use of Artificial Intelligence

Disclosure of generative AI use (tool, version, purpose) or "No generative AI tool was used in preparing this manuscript."
